

Workspace options

[CMD+1]
One Page view
 Initial workspace to edit content of a single page.

[CMD+2]
Two Pages view
 Splitted workspace to compare and edit two pages at the same time, to move content cards between pages. You can open two different pages or one page twice, but in a different scrolling position.

[CMD+3]
Localization view
 Splitted workspace to translate pages into other languages.

Localized content cards are inextricably linked to the original cards: LEFT <- RIGHT.

The right sidebar here performs the editing of locales & navigation between them.

Click on the button in the right sidebar at the bottom to add, delete, rearrange languages.

Note: The number of locales is always the same for all pages!

[CMD+P]
Presentation view
 A visual representation of the content of the current page, or all pages, or a selection of pages in two different design layouts: "Flow" and "Slides". Use the arrow keys to switch the slides.

[CMD+F]
Search panel
 To filter cards by text, content styling, tags, locally or globally for all pages, case-sensitive or not.

[DRAG & DROP] inside
Left & Right Sidebars
 To rearrange pages & locales.

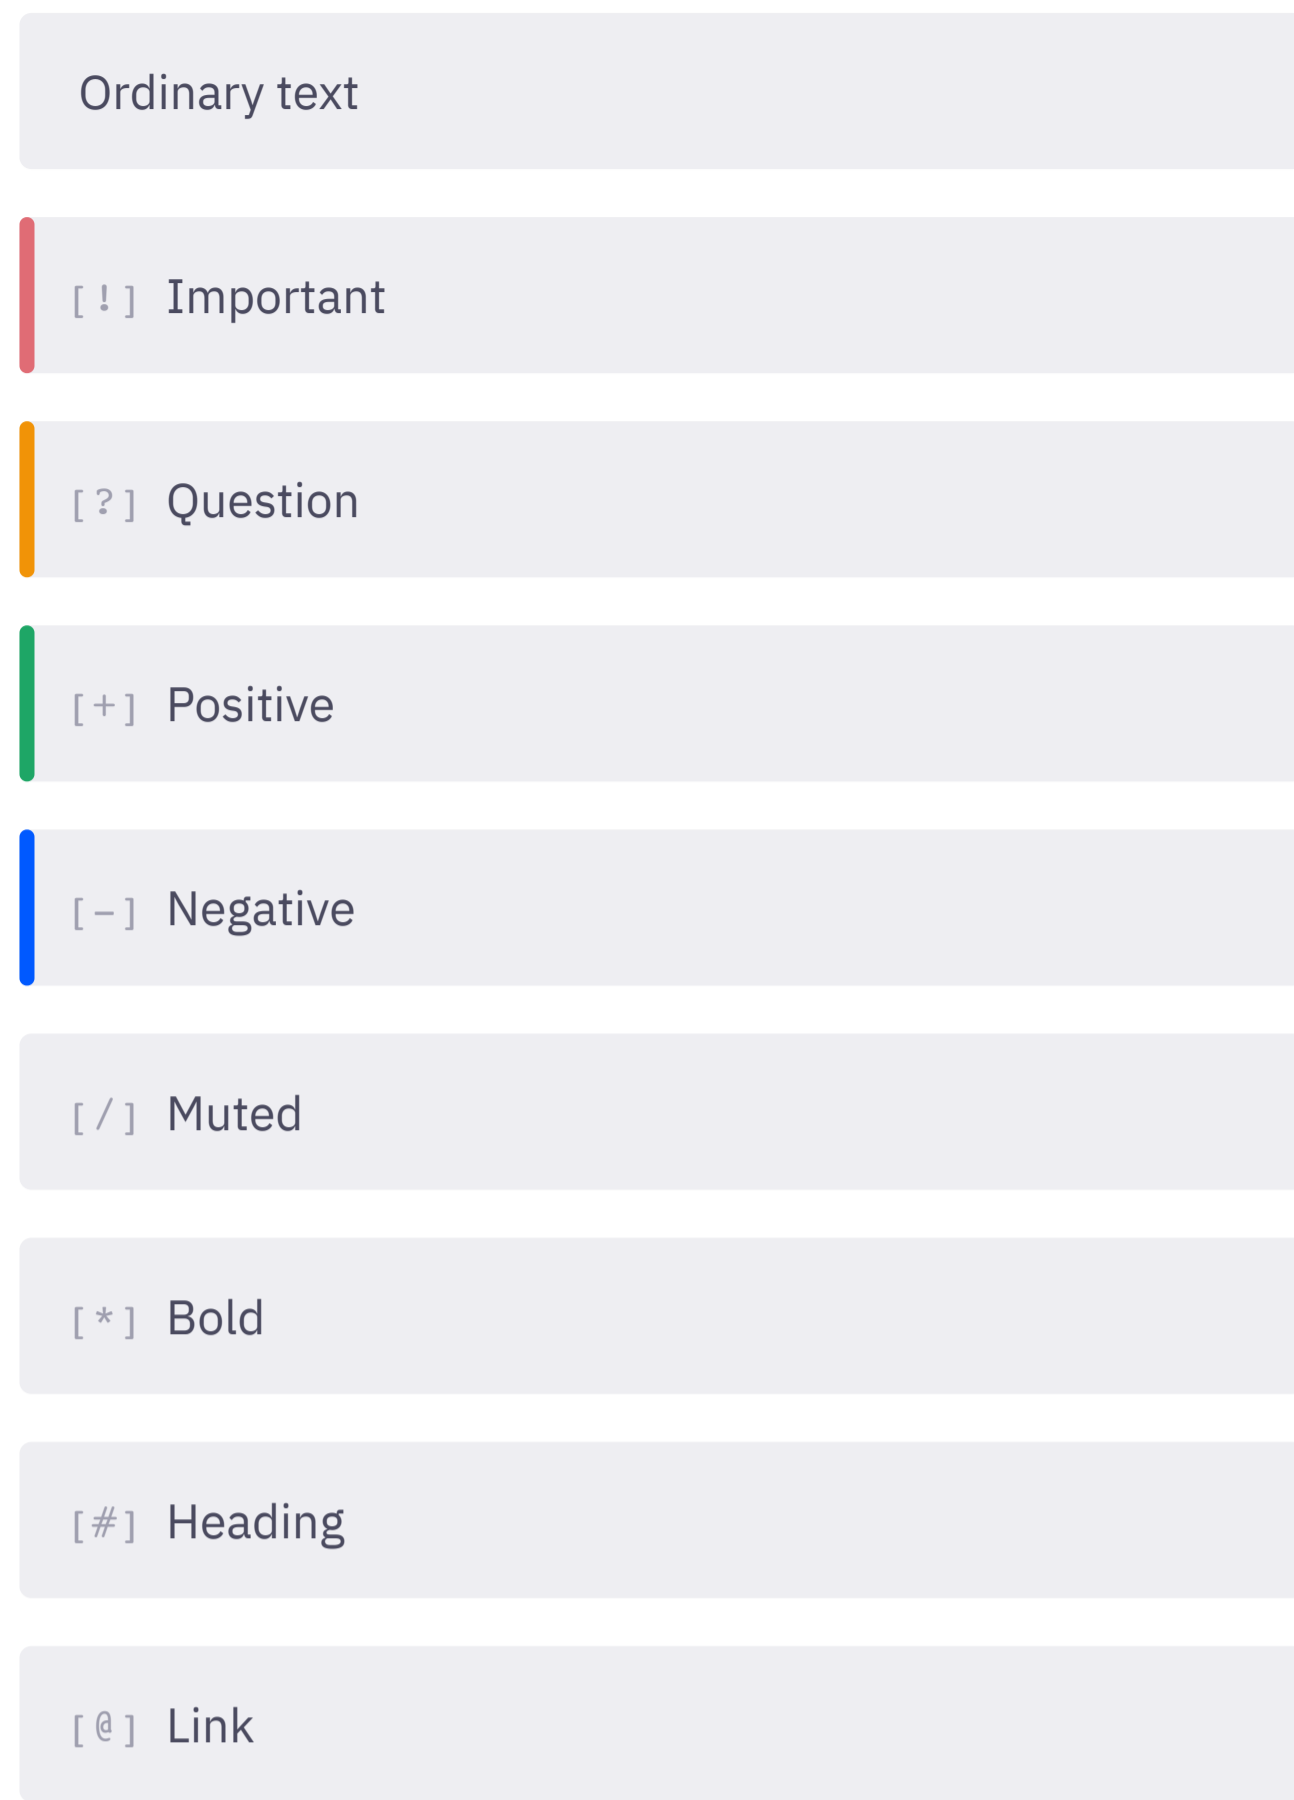

Working with one  or several files 

[CMD+O], [CMD+S], [CMD+SHIFT+S], [CMD+E], [CMD+W]
Open, Save, Save As, Export, Close
 The basic operation with a ProtoText document (*.ptxt).

[CMD+N] + [CMD+O]
Open another document in a new window
 Use the desktops in your operating system to arrange program windows. Try the fullscreen mode, it's comfortable.

Menu > File > Import > Another PTXT file
Merge two documents into one
 Example of use: Place your thoughts on the left side & the document with cognitive biases on the right side to analyze life situations, or ask ChatGPT for assistance 🌈.

Content card markup

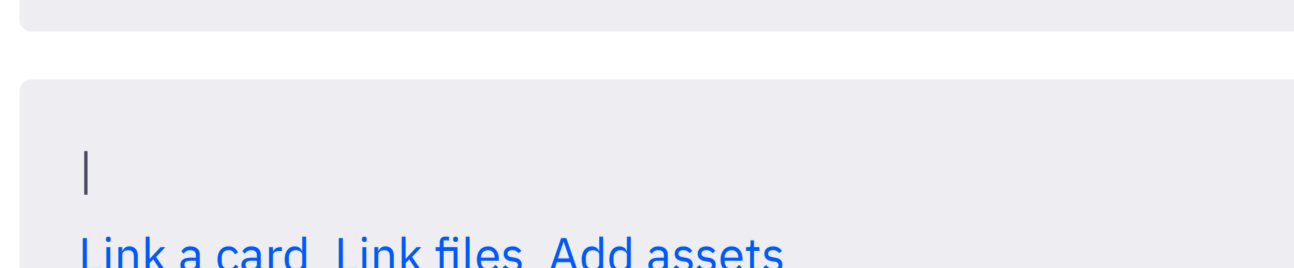

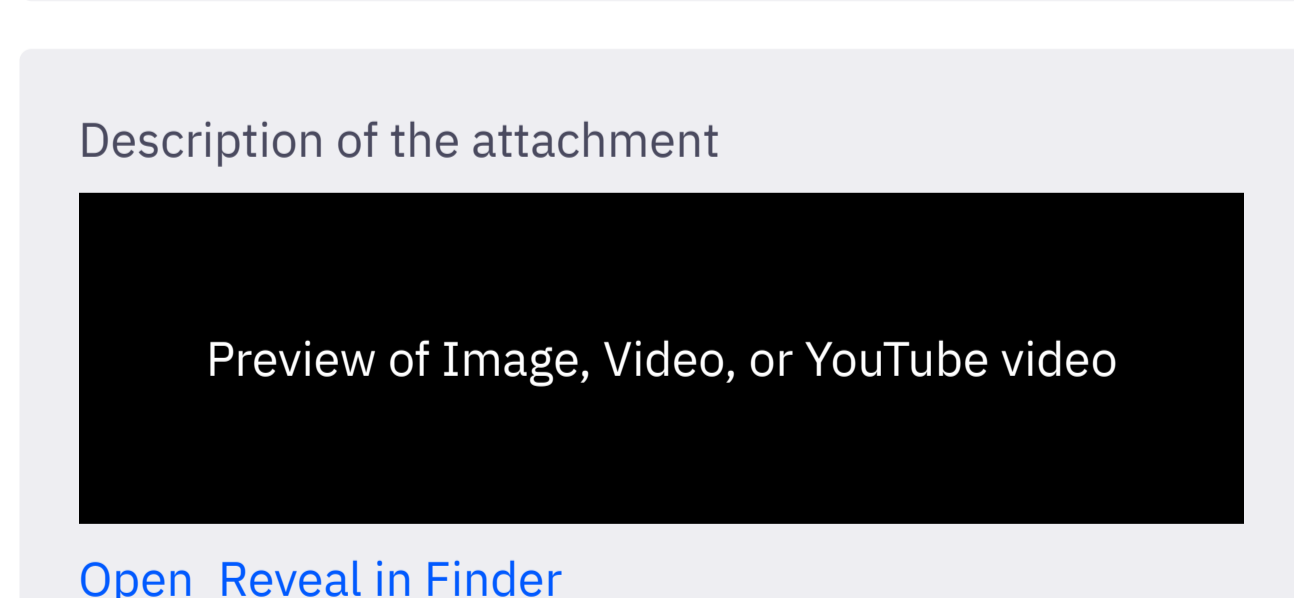

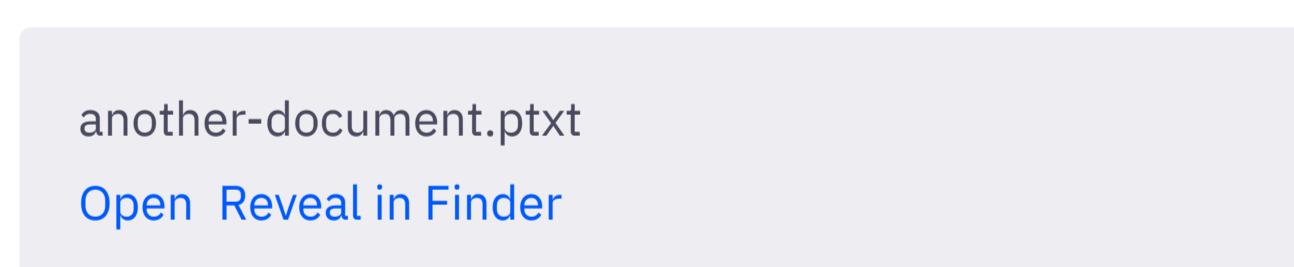

Use one of these special characters at the beginning of the text to markup or style cards.

Press [SPACEBAR] at the text beginning to remove the styling.

Secondary localized cards cannot have their own stylization. They always inherit it from the first localization (original).

Links, Tags & Assets

All these options become available after entering "@" inside the card. The type of link and the behavior of the interface depends on the content of the card.

An "asset" is not just a link, but a copy of a file that the app makes and stores near the current document in the "./assets" directory.

Content card features

[DRAG] the handle [⋮]
 To rearrange cards.

[CLICK] on [⋮]
 To start the card selection mode. Use [SHIFT+CLICK] to quickly select a range of cards, Drag & Drop cards anywhere, [CMD+C] to copy content, [ESC] to reset selection.

[CLICK] on [×]
 To remove a card. If the card contains an asset, the app will ask you about deleting the linked file.

[CMD+D]
 To clone a card.

[ENTER]
 To create or breaks cards.

[SHIFT+ENTER]
 To break the current text line.

[BACKSPACE]
 To remove or merge cards. To delete multiple cards at once, use the key in card selection mode.

The behavior of the [ENTER] and [BACKSPACE] keys depends on the content of the card and the cursor position. Just experiment to understand the principles.

Splitting and merging cards is not directly available for secondary localizations.

[TAB] or [SHIFT+TAB]
 To navigate between cards.

[SHIFT + DOUBLE CLICK]
 To copy the entire content of a card to the clipboard.

[ESC]
 To switch the app to the normal state. To cancel the card selection, dragging, link creation, and AI mode.

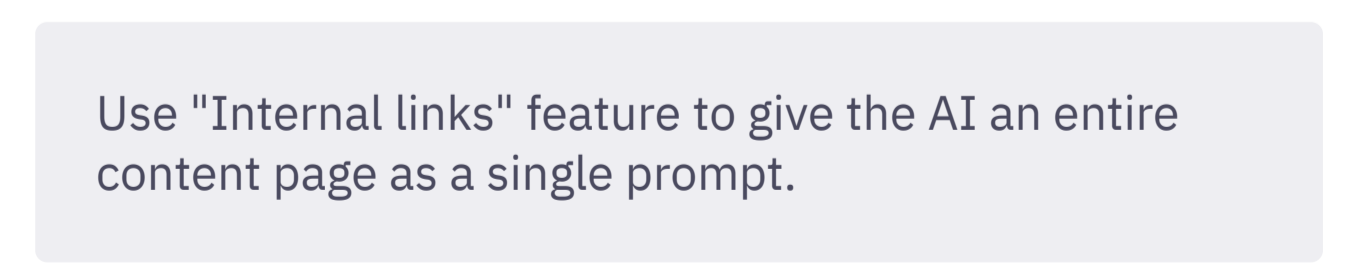

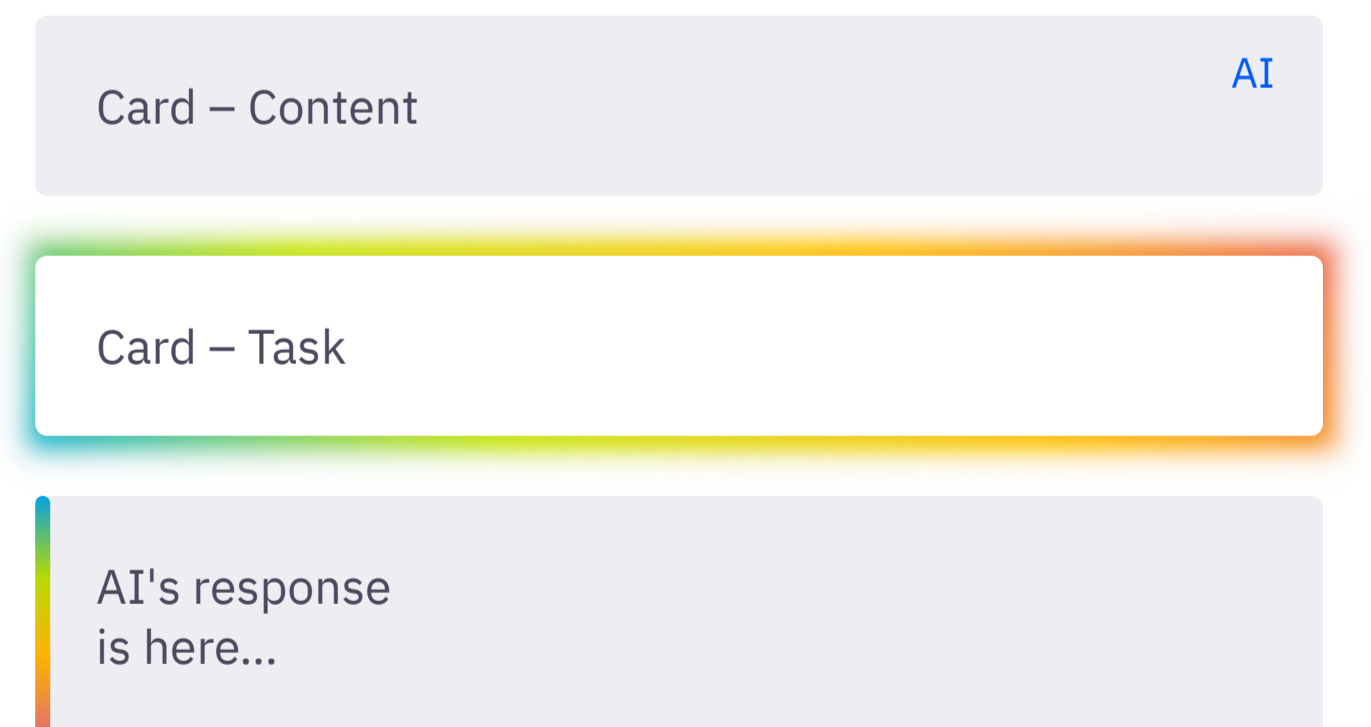

The Power of AI

Currently, ProtoText supports integration with ChatGPT by OpenAI, Microsoft Translator and Speech Synthesis by ElevenLabs.

Go to the Main menu > Settings to activate these cool features.

Text Generation

Use the "AI" button to target built-in ChatGPT to your desired content and task:

[A tutorial video on YouTube](#)

Speech Synthesis

Just one click to generate a high-quality voiceover and save the result as an attached MP3 asset.
